EASA AIRWORTHINESS DIRECTIVE AD No.: 2011-0011 Date: 21 January 2011 Note: This Airworthiness Directive (AD) is issued by EASA, acting in accordance with Regulation (EC) No 216/2008 on behalf of the European Community, its Member States and of the European third countries that participate in the activities of EASA under Article 66 of that Regulation. This AD is issued in accordance with EC 1702/2003, Part 21A.3B. In accordance with EC 2042/2003 Annex I, Part M.A.301, the continuing airworthiness of an aircraft shall be ensured by accomplishing any applicable ADs. Consequently, no person may operate an aircraft to which an AD applies, except in accordance with the requirements of that AD, unless otherwise specified by the Agency [EC 2042/2003 Annex I, Part M.A.303] or agreed with the Authority of the State of Registry [EC 216/2008, Article 14(4) exemption]. Type Approval Holder's Name : Type/Model designation(s) : AIRBUS A319, A320 and A321 aeroplanes TCDS Number : EASA A.064 Foreign AD : Not applicable Supersedure : This AD supersedes EASA AD 2007-0213 dated 07 August 2007. Wings – Outer Wing Main Landing Gear Support Rib 5 Fitting – **ATA 57 Inspection / Modification** Manufacturer(s): Airbus (formerly Airbus Industrie) Applicability: Airbus A319-111, A319-112, A319-113, A319-114, A319-115, A319-131, A319-132, A319-133, A320-111, A320-211, A320-212, A320-214, A320-231, A320-232, A320-233, A321-111, A321-112, A321-131, A321-211, A321-212, A321-213, A321-231 and A321-232 aeroplanes, all manufacturer serial numbers, except aeroplanes on which Airbus modification 32025 has been embodied in production on Left-Hand (LH) and Right-Hand (RH) wings. Reason: Several cases of corrosion of the Main Landing Gear (MLG) support Rib 5 fitting lug bores have been reported on A320 family aeroplanes. In some instances, corrosion pits caused the cracking of the forward lug (sometimes through its complete thickness). If not detected, the cracking may lead to the complete failure of the fitting and thus could affect the structural integrity of the MLG installation. EASA AD 2007-0213 was issued to address this condition and required a repetitive inspection program of the MLG support Rib 5 fitting forward lugs and, as terminating action, the embodiment of Airbus Service Bulletin (SB) A320-57-1118. After that AD was issued, a case of Rib 5, ruptured at the 4 o'clock position, was discovered on an aeroplane on which the terminating action of EASA AD 2007-0213 had already been embodied in accordance with Airbus SB A320-57-1118. Investigation of that case revealed that corrosion damage and cracking that should have been removed by repair machining was below the level of detectability of the Non Destructive Test (NDT) technique that cleared the

	surfaces prior to bush in	ostallation	
	surfaces prior to bush installation. This condition, if not detected and corrected, could affect the structural integrity of the aeroplane.		
	It has also been established that all A318 aeroplanes have had Airbus modification 32025 embodied in production on both LH and RH wings, which is a one-way interchangeable (non-reversible) modification. Consequently, the unsafe condition addressed by AD 2007-0213 cannot occur or develop on those aeroplanes.		
	For the reasons described above, this AD, which supersedes EASA AD 2007-0213:		
	 retains the requirements of EASA AD 2007-0213 for aeroplanes on which the MLG Rib Bushes have not been modified/repaired in accordance with the instructions of Airbus SB A320-57-1118, or Airbus SRM 57-26-13, or the identified Airbus Repair Instructions, as applicable, and 		
	embodied in service, Airbus Repair Instruct program of the MLG s findings, the accompl	lanes on which Airbus SB A320-57-1118 has been or on which Airbus SRM 57-26-13 or the identified tions have been applied, a repetitive inspection support Rib 5 fitting forward lugs and, depending on ishment of the associated corrective actions, and	
	- reduces the Applicability by deleting A318 aeroplanes.		
Effective Date:	04 February 2011		
Required Action(s)	Required as indicated, unless already accomplished:		
and Compliance Time(s):	For the purpose of this AD :		
	 "Action A" is defined as the modification of the MLG Rib Bushes in accordance with the instructions of Airbus SB A320-57-1118 at any revision 		
	 "Action B" is defined as the repair of the MLG Support Rib 5 fitting in accordance with: Airbus A319 Structural Repair Manual (SRM) 57-26-13 paragraph 5.C 		
	or - Airbus A320/A321 SRM 57-26-13 paragraph 5.D, or - Airbus Repair Instruction R572-58376 at issue C.		
	- "Action C" is defined as the replacement in service of the MLG Support		
	Rib 5 in accordance with: - Airbus Repair Instructions R572-58507 and R572-58209, or - Airbus Repair Instructions R572-45020 and R572-45019.		
(1	(1) Within the threshold indicated in Table 1 of this AD, as applicable, inspect the forward lug of each LH and RH MLG support Rib 5 fitting on which <u>none</u> of the actions, Action A, B or C as outlined above, has been performed, in accordance with the instructions of Airbus SB A320-57-1138 Revision 01. Thereafter, repeat the inspection at intervals not to exceed those defined in Paragraph 1.E.(2)(a)3 of Airbus SB A320-57-1138 Revision 01, as applicable.		
	Table 1 – Inspection Threshold		
	Aeroplane type(s)	Compliance Time	
	A319 and A320	• within 150 flight cycles (FC) following the last visual inspection carried out in compliance with EASA AD 2007-0213, or	
		 within 940 FC following the last ultrasonic inspection carried out in compliance with EASA AD 2007-0213, or 	
		 before next flight following a hard landing. 	

		 within 100 FC following the last visual inspection carried out in compliance with EASA AD 2007-0213, or 	
	A321	 within 630 FC following the last ultrasonic inspection carried out in compliance with EASA AD 2007-0213, or 	
		 before next flight following a hard landing. 	
(2)	discrepancy (as de found, apply the as instructions and wi	ection as required by paragraph (1) of this AD, any fined in Airbus SB A320-57-1138 Revision 01) is ssociated corrective actions in accordance with the thin the applicable compliance time, as defined in a)3 of Airbus SB A320-57-1138 Revision 01.	
(3)	Except for aeroplanes on which LH and RH MLG Rib 5 fittings have been replaced in accordance with Action C , within 5 years after 21 August 2007 [the effective date of EASA AD 2007-0213], modify the MLG Rib Bushes in accordance with the instructions of Airbus SB A320-57-1118 Revision 03 or a later approved revision.		
(4)	Modification of a MLG Rib 5 support fitting as required by paragraph (3) of this AD constitutes terminating action for the inspection requirements of paragraph (1) of this AD for that MLG Rib 5 support fitting.		
(5)	perform a detailed RH MLG support ri B , has been perfor	d indicated in Table 2 of this AD, as applicable, visual inspection of the forward lug of each LH and b 5 fitting on which <u>one</u> of the actions, Action A or med, in accordance with the instructions of Airbus 1166. Thereafter, repeat the inspection at intervals FC.	
	Table 2 – Detailed visual inspection threshold		
	Compliance Time - whichever occurs later:		
	fitting in accor paragraph (3)	FC after modification of the MLG support Rib 5 rdance with Action A or as required by of this AD, or after repair of the MLG support accordance with Action B , as applicable,	
		c, without exceeding 3 months, after the of this AD.	
(6)	discrepancy (as de before next flight, c	ection as required by paragraph (5) of this AD, any fined in Airbus Alert SB A320-57A1166) is found, contact Airbus for approved corrective action complish those instructions accordingly.	
(7)	in accordance with inspection requiren	MLG Support Rib 5 fitting at any position (LH or RH) Action C constitutes terminating action for the nents of paragraph (1) or (5) of this AD, as MLG Support Rib 5 fitting at that position.
